

Digital Service

TEAMProjekt Outsourcing adds value. We are an innovative partner and will support you with digital solutions – ranging from production, logistics and quality units to office processes.

We will take over the permanent operation of outsourced processes in a solution-oriented way, focusing on the daily use cases.

TEAMProjekt will already advise you during the design phase, accompany you regarding implementation and take over assigned tasks in an autonomous and sustainable way.

Digitization is essential to optimize processes. Therefore, we support our customers with digital services and appropriate equipment and infrastructure, if needed.

Today, we count enterprises across many industries among our satisfied clients.

- Digital data collection
- Digital data evaluation
- Automated billing
- Status messages
- Document digitization
- Archiving solutions
- Hardware provision

Up to date: TPOWebData©

The platform TPOWebData© was developed by TEAMProjekt to keep you always up to date. You will be provided with a digital image of performance, quality and progress of the areas and processes of which we are in charge. Among other things, we are able to collect data for you, map processes, generate evaluations, send status messages, automate billing and integrate other systems.

Our team will realize your “digital” Project for you

We will develop smart digital solutions for you or together with you within the context of agile software engineering processes. Furthermore, we will provide you with the corresponding interfaces and cloud-based solutions.

Progress continues to advance!

TEAMProjekt will add value to you through automation. Please take a look at the following service portfolio: Automation Services.
